PROFESSIONAL SUMMARY

AWS DevOps Engineer with ~3 years of experience in **cloud infrastructure engineering**, **Infrastructure as Code**, and **CI/CD automation**, delivering **highly available distributed systems** with **99.9% uptime**. Strong expertise in **Terraform**, **GitHub Actions**, and **AWS architecture design**, enabling secure, scalable, and automated deployments across multi-environment enterprise platforms.

TECHNICAL SKILLS

Cloud & Distributed Systems: AWS (EC2, VPC, S3, EBS, EFS, RDS, IAM, CloudFront, Route 53, ELB, Auto Scaling, WAF, SNS)
Infrastructure as Code & DevOps: Terraform (Modules, Workspaces, Remote State – S3 Backend), CI/CD (GitHub Actions), Git, GitHub
Containers & Orchestration: Docker, Kubernetes (Fundamentals)
Monitoring & Observability: CloudWatch, AppDynamics
Programming & Scripting: Bash, Shell Scripting
Databases: Oracle SQL, IBM DB2
Operating Systems: Linux, Unix, Stratus VOS
Mainframe & Legacy Systems: COBOL (Transaction Processing, Screen Maps), Transaction Systems, File Processing, Logging Mechanisms
Tools & Collaboration: JIRA, Confluence
Additional Exposure:
AWS AI/ML Services (Textract, Comprehend, Rekognition, Translate, Transcribe, Polly, Lex)
IBM z/OS (JCL, VSAM, CICS – Training)

PROFESSIONAL EXPERIENCE

AWS DevOps Intern | Vcube Software Solutions | Hyderabad

Aug 2025 – Present

Production-Ready Multi-Region 3-Tier AWS Platform (Terraform + CI/CD)

🔗 https://github.com/rajoli-girisai-madhav/aws-3tier-multi-region-terraform-platform

- Designed **multi-tier AWS architecture** using **Terraform**, enabling **multi-region deployments** across **multi-AZ environments**, ensuring **fault tolerance** and **99.9% uptime**
- Built **CI/CD pipelines** using **GitHub Actions matrix strategy**, automating deployments across dev, QA, production environments with structured validation workflows
- Reduced deployment time by **70%+** (under 15 minutes) through **Infrastructure as Code**, eliminating manual provisioning delays and improving delivery efficiency
- Introduced **approval-based deployment controls** enhancing **release governance**, reducing production risks and strengthening compliance across enterprise deployment workflows
- Engineered **AWS networking architecture** including **VPC**, **subnets**, **route tables**, **security groups**, enabling scalable compute using **EC2**, **Auto Scaling Groups**, **ALB**

- Implemented **S3 remote state management** with locking mechanisms, reducing configuration conflicts by **~60%** and improving collaboration across engineering teams
- Enabled **centralized logging and monitoring** improving system visibility, debugging efficiency, and proactive incident detection across environments

---

Serverless CI/CD Pipeline for React Application (S3, Route 53, CloudFront, ACM & WAF)

🔗 https://github.com/rajoli-girisai-madhav/ rgsmadhav-react-aws-devops-portfolio-cicd

- Built **fully automated CI/CD pipeline** using **GitHub Actions**, enabling continuous build, test, and deployment workflows for frontend React applications
- Hosted application on **Amazon S3** integrated with **CloudFront CDN**, ensuring scalable global content delivery with low-latency access
- Configured **Route 53 domain routing** with custom domain mapping enabling reliable traffic routing and production-grade DNS resolution
- Enforced **HTTPS encryption** using **AWS Certificate Manager (ACM)**, securing application communication across edge and origin layers
- Strengthened application security using **AWS WAF** rules, preventing unauthorized access attempts and protecting application endpoints
- Automated deployments using **AWS CLI (S3 sync)** with version-controlled artifacts ensuring consistent, repeatable, and traceable release processes
- Implemented **CloudFront cache invalidation strategy**, ensuring immediate propagation of updates without stale content delivery

---

Info Tech Senior Associate | NTT Data | Bangalore

May 2022 – Dec 2024

- Managed **high-volume transaction processing systems** ensuring **99.9% uptime** across mission-critical enterprise workloads requiring continuous system availability
- Reduced incident resolution time by **25–30%** using **root cause analysis (RCA)** and advanced debugging techniques improving operational reliability
- Automated operational workflows using **Bash/Shell scripting**, improving execution efficiency and reducing repetitive manual operational tasks significantly
- Developed **monitoring and alerting systems** enabling proactive anomaly detection and improving incident response effectiveness across production environments
- Ensured compliance with **Visa/MasterCard financial regulations**, maintaining secure transaction processing aligned with enterprise regulatory standards
- Monitored production systems using **AppDynamics**, improving system stability, performance visibility, and enabling data-driven operational improvements
- Developed and maintained **COBOL-based transaction programs**, handling **input validation**, **business logic processing**, and **backend data operations**, ensuring reliable transaction execution

---

KEY ACHIEVEMENTS

- Improved engineering efficiency by **70–80%** using **Terraform-based Infrastructure as Code** and CI/CD automation reducing manual provisioning overhead
- Maintained **99.9% uptime** across cloud and mainframe systems ensuring high availability for mission-critical enterprise workloads

- Reduced deployment time by **70%+** through CI/CD automation improving release speed and delivery consistency
- Strengthened application security by blocking **90%+ malicious traffic** using **AWS WAF controls**, enhancing application-layer protection
- Reduced incident resolution time by **25–30%** through improved monitoring systems and structured **root cause analysis** practices

---

CERTIFICATIONS & ACCOMPLISHMENTS

- Mainframe Application Developer – NTT DATA
- Financial Systems Certification – NTT DATA
- SQL (Intermediate) – HackerRank
- Performance Excellence Award – 100% SLA compliance

EDUCATION

Bachelor of Technology (B.Tech) – Electrical and Electronics Engineering
S.V. College of Engineering
Sep 2017 – Aug 2021
